what is the way to make a sqbullet in itemize structure

First of all, when I want to use an itemize structure in simply latex document I have not this problem, I mean, I got sqbullet in itemize list. But.. when I inlcude a tikz picture, maybe, I load some packages and then I got dots in itemize list. For this reason, I would like to know how to get sqbullet in this cases. I´ve tried

```
\begin{itemize}
    \item [\sqbullet] A
\end{itemize}
```

or somethin like this How to change the nested itemize bullet characters?

But I didn´t. Thank you in advance!

{itemize}

1   What packages are you loading? Probably the answer is to load `mathabx` as the last one. – karlkoeller Aug 11 '13 at 15:19

1   And anyway it should be `\item[$\sqbullet$] A` – karlkoeller Aug 11 '13 at 15:26

Thank you karlkoeller! It works! – FJSJ Aug 28 '13 at 9:02

@karlkoeller Will you create an answer to remove this question from the unanswered list? – masu Oct 10 '13 at 11:46

[**Just to answer the unanswered, converting comments into an answer**]

Load the `mathabx` package as the last one and remember to use `\sqbullet` in math mode:

```
\begin{itemize}
    \item [$\sqbullet$] A
\end{itemize}
```
